Flutter Exercises

1 Centered Greeting

EASY

`Center · Text`

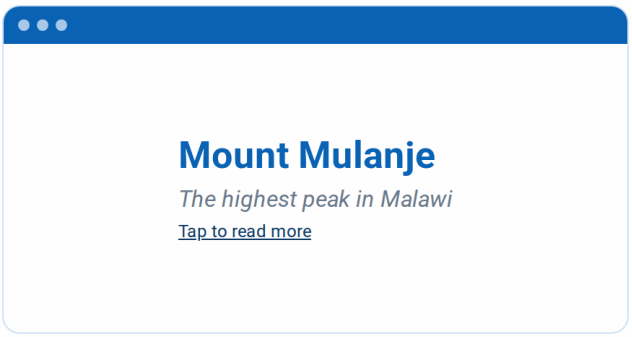

Recreate this: the text "Hello, Flutter!" at font size 30, bold, placed exactly in the middle of the screen using Center.

2 Text Styles

EASY

`Column · Text`

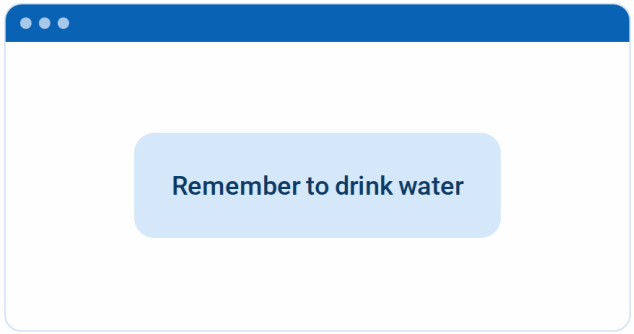

Recreate this column: a bold size-26 blue title, an italic grey subtitle, and a small underlined caption, each with its own TextStyle.

3 Padded Panel

EASY

`Container · Padding · Text`

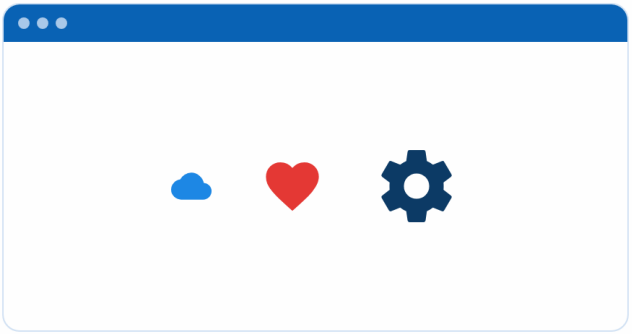

Recreate this: a light-blue Container with rounded corners whose text has 26 pixels of space on every side. Use the Padding widget, not the Container's own padding property.

4 Icon Sizes and Colors

EASY

`Row · Icon`

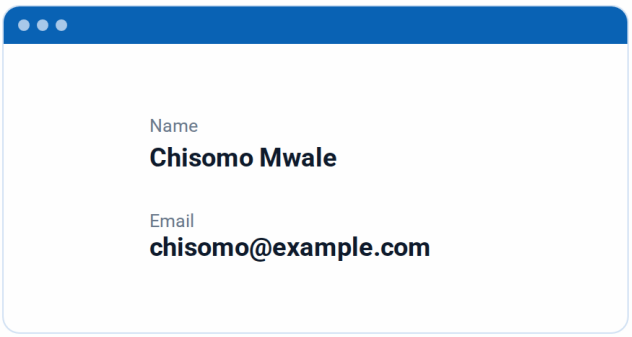

Recreate this row: three icons (cloud, favorite, settings) of growing size (28, 44, 60), each in a different color, lined up along their centers.

5 Label Gaps

EASY

`Column · SizedBox · Text`

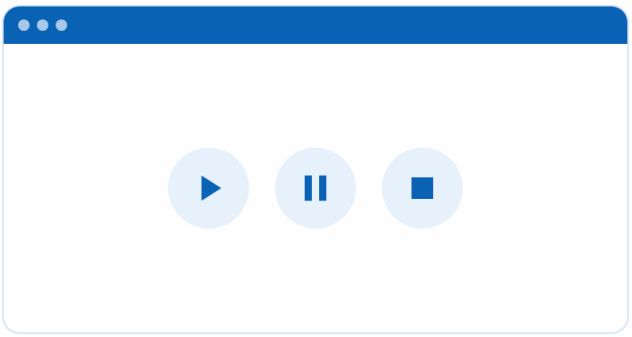

Recreate this: two label-and-value pairs in a Column. Use a SizedBox for the small gap (4) inside each pair and the larger gap (16) between the pairs.

6 Icon Button Bar

EASY

`Row · IconButton`

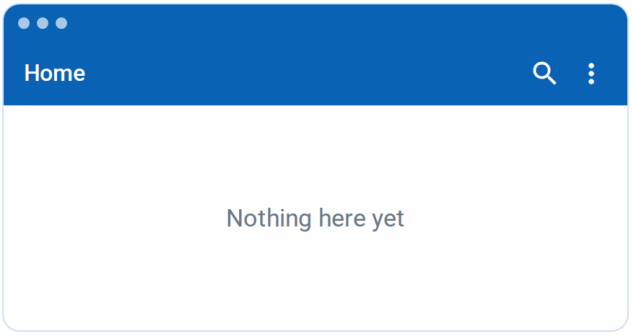

Recreate this row: three IconButtons (play, pause, stop). When one is pressed, print its name to the console with print().

7 Home with Actions

EASY

`Scaffold · AppBar · Center · Text`

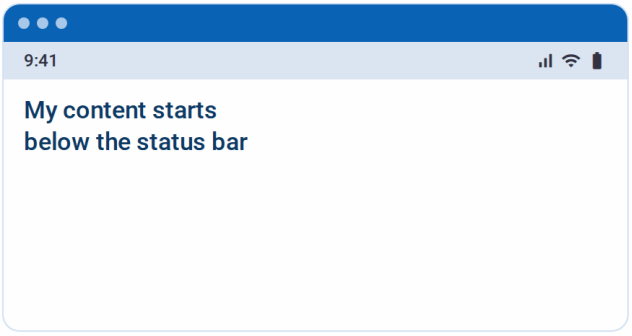

Recreate this: a Scaffold with an AppBar titled "Home" and two action icons on the right (search and more), and a centered "Nothing here yet" in the body.

8 Safe Screen

EASY

`SafeArea · Scaffold · Text`

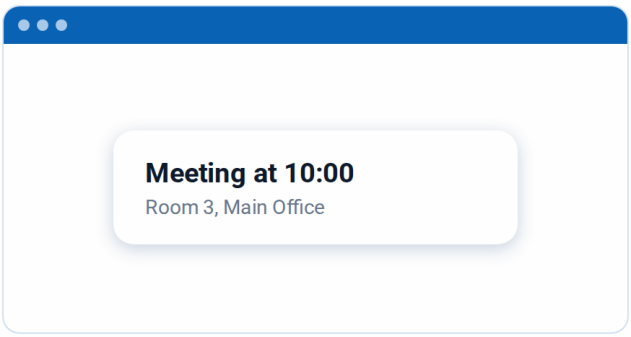

Recreate this: a Scaffold with no AppBar, whose body is wrapped in SafeArea so the text is not hidden under the status bar or notch.

9 Message Card

MEDIUM

`Card · Padding · Column · Text`

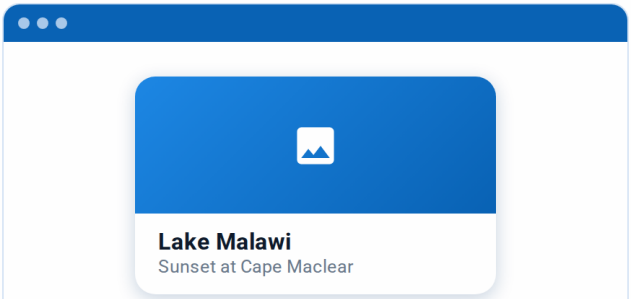

Recreate this: a Card with elevation 6 and 16-pixel rounded corners, holding a bold title and a smaller grey line, with 18 pixels of padding inside.

10 Photo Card

MEDIUM

`Card · Column · Image · Text`

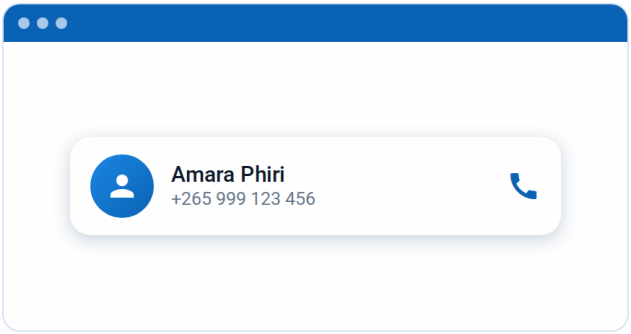

Recreate this: a Card with an Image filling the top edge, then a bold title and a grey caption underneath. The card should clip the image to its rounded corners.

11 Contact Tile

MEDIUM

`Card · ListTile · Icon`

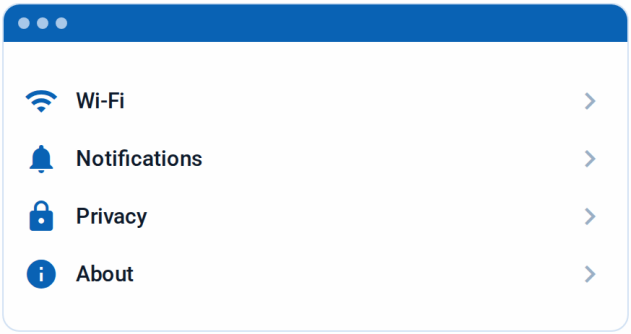

Recreate this: a Card containing one ListTile with a circular avatar on the left, a name and phone number in the middle, and a call icon on the right.

12 Settings List

MEDIUM

`ListView · ListTile · Icon`

Recreate this: a ListView of four ListTiles, each with a leading icon, a title and a trailing arrow. Pressing a tile should print its title.

13 Split Screen

MEDIUM

`Row · Expanded · Container`

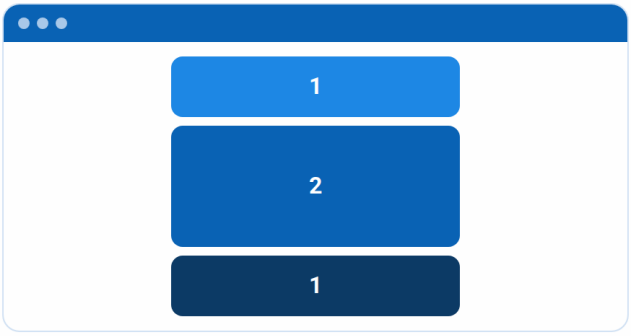

Recreate this: a Row that fills the whole body, split into a narrow dark "Menu" panel and a wide light "Content" panel. The wide one is three times as wide (Expanded with flex 1 and 3).

14 Flex Ratios

MEDIUM

`Flex · Expanded · Container`

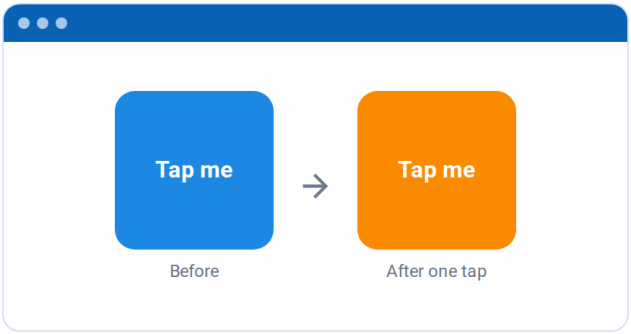

Recreate this: three colored boxes stacked top to bottom, with heights in the ratio 1 : 2 : 1. Build it with a Flex widget set to Axis.vertical, then change it to Axis.horizontal and see what happens.

15 Tap to Change Color

MEDIUM

`GestureDetector · Container · StatefulWidget`

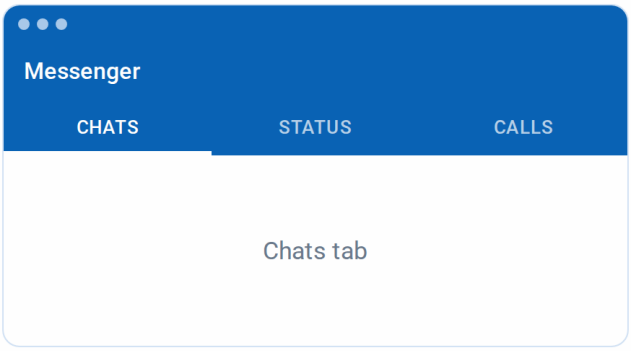

Recreate this and make it work: a 110x110 box that switches between blue and orange every time it is tapped. Wrap the Container in a GestureDetector and call setState.

16 Tabbed Screen

HARD

`Scaffold · AppBar · TabBar · TabBarView`

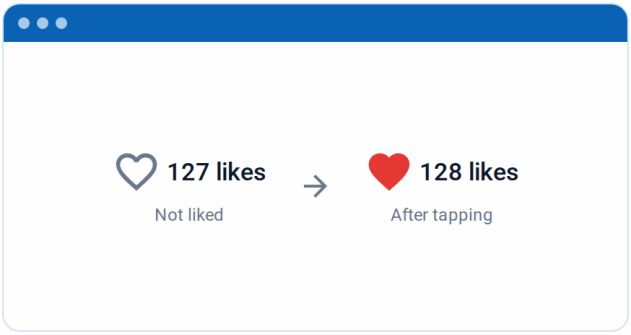

Recreate this: a screen with an AppBar titled "Messenger" and a TabBar with three tabs (Chats, Status, Calls). Each tab shows its own centered text. Use DefaultTabController and TabBarView.

17 Like Button

HARD

`StatefulWidget` · `Row` · `IconButton` · `Text`

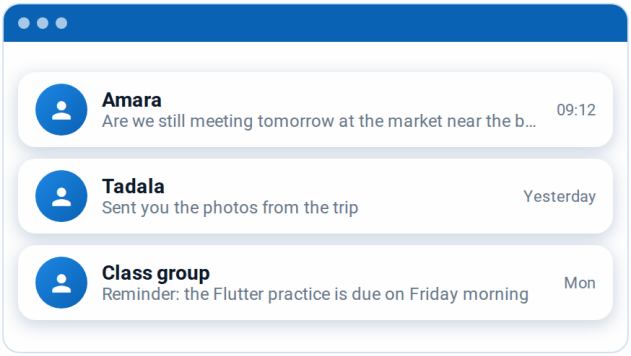

Recreate this and make it work: tapping the IconButton swaps the outline heart for a filled red one and adds 1 to the count. Tapping again undoes it.

18 Inbox

HARD

`ListView` · `Card` · `Row` · `Expanded` · `Padding`

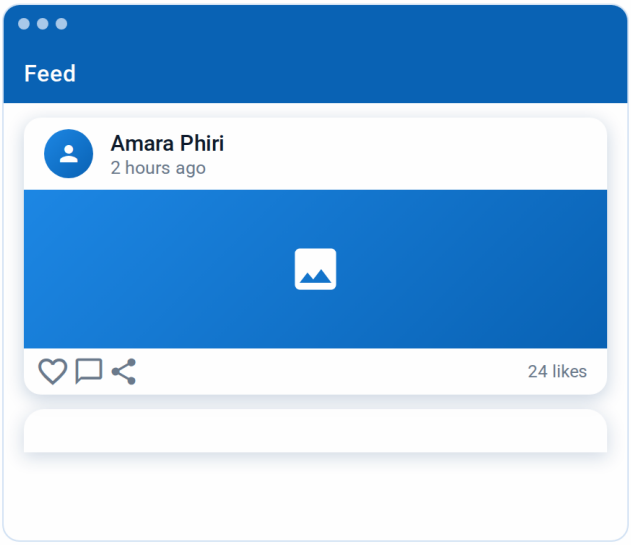

Recreate this: a ListView of three Cards. Each has an avatar, a name with a one-line message preview, and the time on the right. Use Expanded so long messages end in "..." and never push the time off screen.

19 Photo Feed (capstone)

HARD

`Scaffold` · `AppBar` · `SafeArea` · `ListView` · `Card` · `ListTile` · `Image` · `IconButton` · `GestureDetector`

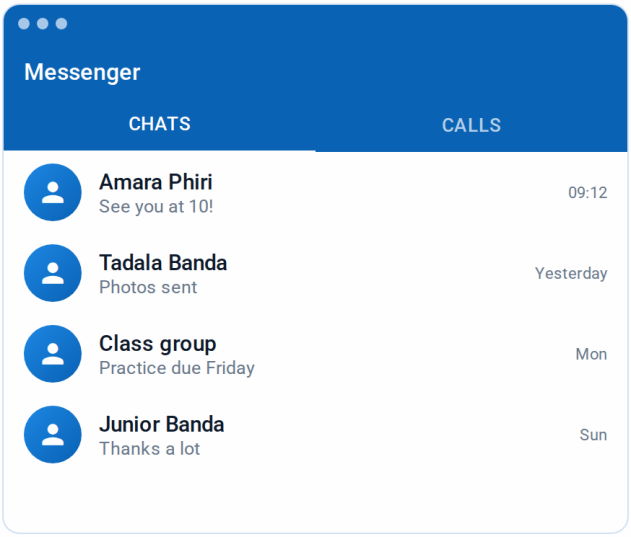

Recreate this full feed screen: an AppBar titled "Feed", then a scrollable ListView of post Cards. Each post has a ListTile header (avatar, name, time), an Image, and a row of three IconButtons with a like count. Wrap the Image in a GestureDetector that prints "Opened post" when tapped, and put the body inside SafeArea.

20 Messenger (capstone)

HARD

`Scaffold` · `AppBar` · `TabBar` · `TabBarView` · `ListView` · `ListTile` · `GestureDetector` · `SizedBox`

Recreate this two-tab messenger: "Chats" lists contacts as ListTiles (avatar, name, last message, time) and "Calls" shows the same people with a call icon instead of the time. Wrap each avatar in a GestureDetector that prints the contact's name when tapped, and use SizedBox for any extra spacing.
